Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Chad W. Swantz, on August 8, 2005.

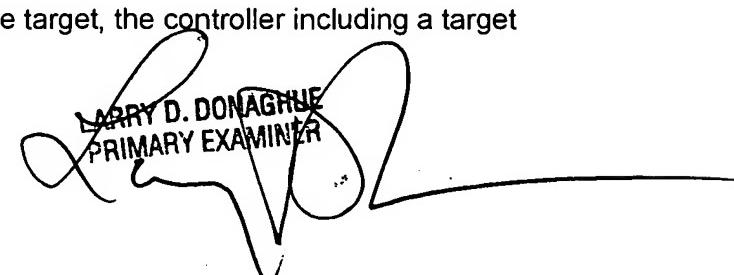

3. The application has been amended as follows:

19. (Currently amended) An input/output interface suitable for communicatively coupling a host with a target device, comprising:

at least one port communicatively coupling the input/output interface with a host;

at least one port communicatively coupling the input/output interface with a target; and

a controller communicatively coupled to the at least one port communicatively coupling the input/output interface with the host and the at least one port communicatively coupling the input/output interface with the target, wherein the controller receives an identifier including a bus field and an ID field from the host, the controller shifts at least one of the bus field and the ID field into a linear value to generate a logical identifier, the logical identifier suitable for being utilized in conjunction with a look-up table to provide access to the target, the controller including a target masking configuration utility. A handwritten signature in black ink, appearing to read "LARRY D. DONAGHUE" followed by "PRIMARY EXAMINER". The signature is written over a stylized, abstract drawing consisting of several loops and curves.

Notice of Allowance

4. The following is an examiner's statement of reasons for allowance:

None of the prior arts of record teaches or fairly suggests all of the limitation recited in the claims, specifically an input/output interface comprising a controller that generates a logical identifier by shifting at least one of a bus field and ID field to create a liner value.

Applicant has also filed a terminal disclaimer to overcome the double patenting rejection with copending application #09/994,082 now US Patent #6,728,789. Upon examining the history of the prosecution of application #09/994,082, #9/994,082 was also issued an allowance because prior arts of record do not teach or suggest of a controller generating a logical identifier by shifting at least one of a bus field and ID field to create a liner value

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joshua Joo who telephone number is 571 272-3966
